Thank You!

Thank you for volunteering to join the UnaliWear User Experience Test of the Kanega watch.

Your watch is here!

What's in the Box?

- The pre-production Kanega watch
- Four batteries
- Battery charger
- Power plug for charger

Getting to Know the Kanega Watch

There are a few things to know about the Kanega watch.

First, the crown button is different than that of your typical watch. You can press it, but it doesn't turn, as there is no need to manually set the time with the Kanega watch. (The time is set automatically!)

When instructed to press the crown button, press the center part of the crown. The outer part of the crown is solid to protect against accidental presses, so only the center part can be pressed.

Second, the Kanega watch is designed to be worn all the time. The batteries are designed to be changed about once a day.

Four batteries are provided so that two can be charging while the other two are on the watch. With two batteries on the charger, an empty slot is available for a battery that is removed from the watch.

> NOTE: A helpful online video of tips on replacing and charging the Kanega watch batteries can be found at:
>
> http://www.UnaliWear.com/UX-tester

Charging the Batteries for the First Time

Before you do anything with the watch, you need to charge the batteries.

Connect the power cable of the charger to a wall plug.

Place two batteries in the charger as shown in the picture.

The sides of the charger will pulse red if the battery is charging and will alternately flash red if the battery is not making good contact with the charger. The light will turn solid green once the battery is fully charged.

Charging a battery from empty may take up to three hours.

Placing the Batteries on the Watch

Once two batteries are fully charged with green charging lights, place one charged battery on each side of the watch. (Now is a good time to put the other batteries on the charger so that they will be ready when needed.)

When placing a battery on the watch, squeeze the sides of the battery and place it bottom first. Give it a press with your thumb to make sure it is secure.

Turning on the Watch for the First Time

To turn on the Kanega watch for the first time, press and hold the crown button until you see the bar on the display disappear, then release. The time will appear in the display.

The time may initially be off an hour or two. The Kanega watch will determine your location and contact the internet to adjust to your time zone, but this may take some time.

Testing

As a "trailblazer" tester, you are getting one of the first pre-production watches. The focus in the early testing is on the hardware functionality and battery operation and charging.

The Kanega watch features the ability to update its software automatically through the Wi-Fi and cellular connection. This allows us to update the software automatically. So, we'll be upgrading the functionality throughout the test.

But for now, ask your watch to tell you the time. The name of your watch is "Fred Astaire". Try asking your watch about the time:

- **"Fred Astaire"** (wait for the watch to buzz once)
- **"What time is it?"**

If everything is working properly, then the Kanega watch will respond with the time.

Getting Your Attention

When the Kanega watch needs to tell you something, such as when the battery charge is low, it will notify you with two short buzzes.

You can tell the Kanega watch that is OK to proceed by pressing the crown button once.

If you do not respond, the Kanega watch will assume it is a bad time to communicate with you and will defer the notification. You can also defer the notification with two quick presses of the crown button.

Recharging the Batteries

The Kanega watch will notify you when it is time to change the batteries on your watch with two short buzzes as described above.

Replace the discharged batteries with fully charged ones from the charger. Always leave non-used batteries on the charger so that you always have fully charged batteries ready to go.
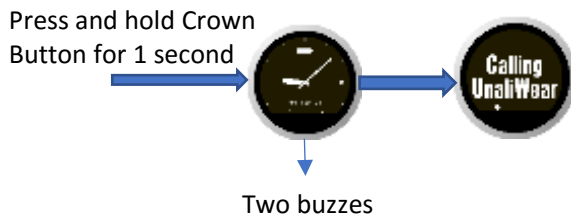

Contacting the Monitoring Center

Note: in this early phase of testing, the monitoring center is not active. Calls will be directed to UnaliWear and will be answered during normal business hours. Calls made through the watch may be recorded so that audio quality can be evaluated.

In case of an emergency, call 911 with a telephone.

During this phase of testing, a special operation is needed to test the call out functionality:

1. Press and hold the crown button (Approximately 1 second). You will feel a short buzz and then another longer buzz. Release the button after the second vibration.
2. The Kanega watch will say "contacting UnaliWear" and place a call to UnaliWear. (This will be the monitoring center in later stages).
3. Press the crown button twice to hang up.

Press and hold Crown Button for 1 second

Calling UnaliWear

Two buzzes

You can also contact UnaliWear (or the monitoring center in later stages) by use of a voice command:

1. Say the watch's name, "Fred Astaire".
2. Wait until you see the listening ear icon, then say "Get help".
3. The Kanega watch will say "contacting UnaliWear" and place a call to UnaliWear. (This will be the monitoring center in later stages).
4. Press the crown button twice to hang up.

Say "Fred Astaire"

Say "Get Help"

Calling UnaliWear

Single buzz

Verifying name and preparing to listen

Listening for a command Single buzz

The Kanega Watch Display

The watch display remains off during normal use. The display will turn on when:

- You say the name of your watch, "Fred Astaire",
- You press the crown button, or

- You raise your arm to look at the time. (Note: the watch may not turn on when raised immediately after a period of inactivity as the watch may think that you are asleep.)

Information and Option Screens

- If you press the crown button while the time is showing, the Kanega watch shows the date and day of the week.

- While the date and day is showing, a double press of the crown button brings up the information and configuration screens. A single press of the crown button will cycle through the information, clock face, and brightness control screens as explained in more detail below. Holding the crown button for a half second will take you back to the time display.

Information Screen

The information screen shows the battery charge in percent and information about the last time the Kanega watch checked-in with the UnaliWear servers: date, time, connection (cell or Wi-Fi), and signal strength of the connection.

Clock Face Options

The clock face screen allows selection of an analog or digital display of the time. The digital display can use either a 12 or 24 hour clock.

Press the crown button three times quickly to cycle through the clock face options and select the style of display time.

Brightness Control

The brightness of the Kanega watch display can be increased or decreased with the brightness control screen. Press the crown button three times quickly to select the desired brightness.

Care of the Kanega Watch

The pre-production Kanega watch can be splashed, but it is not yet waterproof. Please take care not to immerse.

A damp cloth is all that is needed to clean the Kanega watch.

Questions? Need Anything? Talk to Us

We'll be in touch to ask how things are going, but please contact us in the meantime if you have any questions or issues.
