

Quick Start Guide

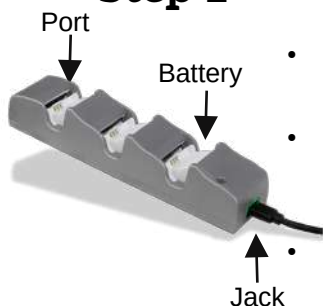

What's in the box?

Kanega LTE Watch, Charger, Power Cable, Four Batteries, Quick Start

Videos and downloadable User Guide at www.unaliwear.com/support.

Step 1 Charge your Kanega batteries before inserting on the watch

- Connect the power cable to one end of the charger and plug into wall. Verify green light on charger jack is on.
- Insert two (2) batteries into ports by placing the top end with the gold prongs first, and then pressing the bottom of the battery gently downwards until you hear or feel it attach into place.
- Battery light fades red when batteries are charging and turns green when they are charged. Charging time may take up to 4 hours.

Step 2 Install fully-charged Kanega batteries on the watch (in a location with good cellular connection).

- To insert a battery, place the top end with the gold prongs first, and then press the bottom of the battery gently downwards until you hear or feel it attach into place.
- Place a charged battery on both sides of the watchband and put the remaining two batteries on the charger so they are ready when needed.

- You will see a black/blank screen. After batteries are installed for the first time, the display changes to '**Kanega Watch**' with moving dots. If you do not see this within 5 seconds, press the crown button once.
- Initial set up may take up to ten (10) minutes.
- The display changes to '**Press crown to begin**' when the watch is ready for you to listen to the short tutorial.

Step 3 Listen to welcome voice tutorial through the Kanega watch speaker.

- One short press of the crown button starts the 5 minute voice tutorial. There is one (1) minute to begin before the watch goes to sleep and returns to black/blank screen.

- Please wear your Kanega watch during the voice tutorial.
